APP 7th Indo-US Conference-2019

Objective of Conference

Pharmaceutical Sciences is a dynamic and interdisciplinary field that aims to integrate fundamental principles of physical and organic chemistry, engineering, biochemistry, and biology to understand how to optimize delivery of drugs to the body and translate this integrated understanding into new and improved therapies against human disease. Pharmacology is concerned with the study of drug action, where a drug can be broadly defined as any man-made, natural, or endogenous molecule which exerts a biochemical or physiological effect on the cell, tissue, organ, or organism. Drug design is the inventive process of finding new medications based on the knowledge of a biological target. The pharmaceutical industry discovers, develops, produces and markets pharmaceutical drugs for use as medications to be administered to patients, with the aim to cure them, vaccinate them, or alleviate the symptoms. In the present conference, pharmaceutical experts from international and national universities/institutions will address the diverse issues related pharmaceutical sciences and research.
